

## Chemical Treatment

Chemical Only Service \$60.00

Description: Each week we test your pool water for ph, alkalinity, chlorine, and other important test readings. We then add the appropriate chemicals to balance out your pool water. We then fill out a Service card telling you the time, date, chemical readings, and whatever else we do to your pool that day. The equipment will be inspected and the owner will be notified if a repair is needed. The card will be left in your pool timer box.
